

Kevin Bamwisho

EDUCATION

Colorado School of Mines | Golden, CO

GPA: 3.75

Bachelor of Science in Computer Science

May 2027

Master of Science in Data Science

May 2028

EXPERIENCE

Full Stack Engineer

May 2025 – Present

RIOT Sports, Internship

Golden, CO

- **Building and managing** a sports analytics site that computes clinch and elimination scenarios, developing the entire stack from the data pipeline to a redesigned frontend.
- **Replaced** brittle web scraping with API-driven ETL pipelines, backed by an input/output verification layer.
- **Built** a schedule-aware cron system that cut number of solves by **67%** while still landing results within minutes.
- **Automated** clinch/elimination alerts and a competitor site observer, **replacing hours** of manual tracking/logging.
- **Presented** weekly to the full team and set up extra advisor and teammate meetings as needed.

AI Engineer | Technical Consultant

May 2026 – Jun 2026

Qualcomm (Contract)

Boulder, CO

- **Delivered** a text-to-SQL analytics chatbot for the Test Base Station team (**2,000+** internal test systems), letting engineers query production databases in plain English, with MVP shipped in **4 weeks**.
- **Cut** schema lookup cost **97%** ($\sim 20K \rightarrow 500$ tokens per query) by replacing full schema dumps with targeted table retrieval, eliminating a grep cascade and reducing tool calls and latency.
- **Unified 3** databases behind an MCP connector, enforcing read-only execution with query timeouts and row limits.
- **Architected** the agentic core on LangChain Deep Agents with a ReAct loop and RAG grounding over a vector database, shipped full stack on FastAPI and React/TypeScript.

Applied Data Science Research Assistant

May 2024 – Present

Colorado School of Mines

Golden, CO

- **Published research** on a tri-objective mixed-integer optimization model for EV charger placement, balancing demand, equity, and grid infrastructure costs; presented at the INFORMS Annual Meeting in 2025.
- **Produced** the paper's geospatial figures and interactive maps for stakeholders, classifying **17,424** census blocks as urban, suburban, or rural with KMeans on building density and household features.
- **Standardized 500,000+** shipment records from 9 source systems in a Python pipeline, producing route-level KPIs and fleet size estimates for a Fortune 500 mining partner's railcar leasing strategy.

PROJECTS

AlgoBowl, Enclose Horse Solver | Python

April 2026

- **Ranked #1 on 38 of 47** competitor inputs and matched the **proven best possible answer on 18 of 18** instances small enough to verify, on a 3-person team.
- **Authored** the core feasibility solver, a fast max flow check, and a 3 phase search algorithm, plus a compute allocator that spent an overnight budget where marginal gain was highest.

NBA Win Probability Pipeline | Python, TensorFlow/Keras, scikit-learn, Pandas

Dec 2025

- **Built** an end-to-end prediction pipeline on **1,734** games from the ESPN Scoreboard API, engineering eFG%, free throw rate, rest days, and 5-game rolling averages with a leakage guard on outcome-derived features.
- **Trained** polynomial regression, random forest, and ANN models, reaching $R^2 \approx 0.83$ (RMSE 0.083) and using random forest feature importances to identify the top drivers of win percentage.

Clue | Java, OOP

Oct 2025 – Nov 2025

- **Built** a playable Clue game on a config-driven, object-oriented Java engine with graph-based movement.
- **Developed** test first with JUnit on a 2-person Agile team, deployed to the browser via CheerPJ WebAssembly.

TECHNICAL SKILLS

Languages: Python, SQL, Java, C++, R

AI/ML: LangChain, MCP, RAG, Qdrant, TensorFlow/Keras, scikit-learn

Frameworks & Libraries: FastAPI, React, Django, Pandas

Dev Tools & Practices: Git/GitHub, CI/CD, Docker, Linux, TDD, Netlify, Cloudflare, Claude Code

HONORS & ORGANIZATIONS

Sachs Foundation Scholar · C-MAPP Scholar · President's Scholar · INFORMS · NSBE · ColorStack · Club basketball
